Available at the Google Play Store and the Apple App Store for Android 4.x or higher, or for iOS 8.4 or higher.

A proven system for various applications

The DALI PROFESSIONAL light management system with new functions

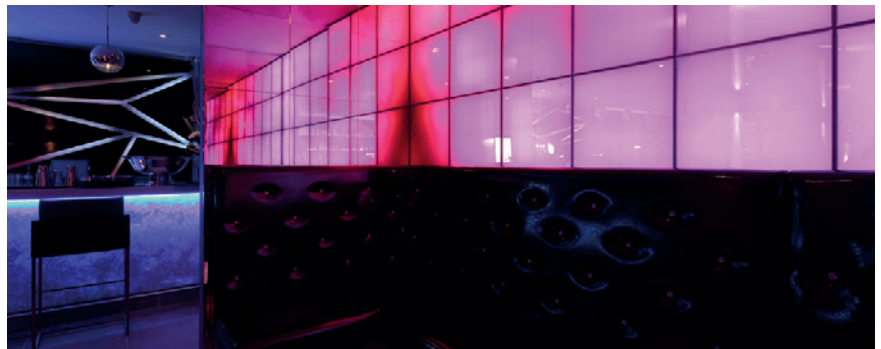

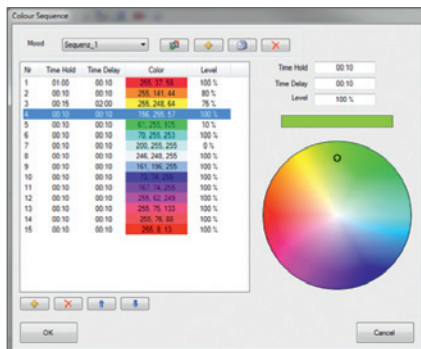

DALI PROFESSIONAL is suitable for lighting control in several rooms, halls or on entire floors. The flexible system is ideally applicable especially in industrial or office buildings with several individual offices, medical practices, or restaurants. New functions, such as controlling light colors (RGB), color temperatures and dynamic color changes, have now been added to standard functions such as switching, dimming, presence detection and daylight-dependent lighting control.

Alternative control elements

Apart from your smartphone, operating the controls can, of course, also be done via conventional pushbuttons, which are wired to a DALI PROFESSIONAL pushbutton coupler. In addition, you also have a range of OSRAM DALI sensors for light and presence detection at your disposal, which can be used for the most varied applications. All in all, up to 50 pushbutton or sensor couplers can be integrated. Daylight-dependent and movement-dependent lighting control for mounting heights of up to 13 m are possible with the DALI HIGHBAY ADAPTER and the HIGH BAY SENSOR.

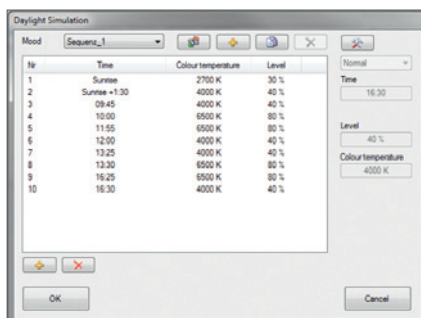

New: RGB sequencer

- Freely configurable color sequences for dynamic light with adjustable stopping times and cross-fading times
- Up to 100 sequences parameterizable
- Up to 50 color scenes per sequence
- Easy color selection via color wheel

New: Time-of-day-dependent color temperature adjustment (human centric lighting)

- Freely configurable profiles with time-of-day-dependent light value and color temperature adjustment
- Integrated Astro function with adjusted sunrise and sundown times for any time of the year
- Can be interrupted any time (starting triggers light and color temperature value according to the current time of day)
- Combinable with timer function and presence detector
- Up to 50 different scenes per profile
- Up to 100 profiles per project

Flexible light management – now also via smartphone

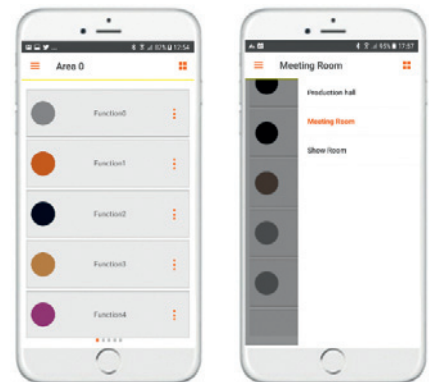

DALI PRO Control – the app for the DALI PROFESSIONAL light management system

With its four DALI lines (up to 256 luminaires*), the DALI PROFESSIONAL light management system offers a solution for virtually all requirements for lighting control in modern buildings. With the DALI PRO Control app, the flexible system can now be easily controlled via smartphone. The app's functions are configured at a personal computer. Its operation is intuitive and clearly structured.

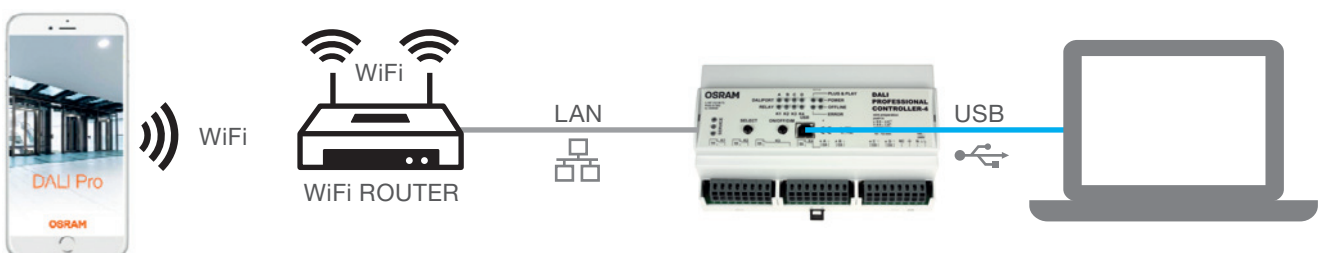

App features at a glance

- Comfortable switching and dimming of illumination with status display
- Clearly arranged through grouping of rooms
- Access restriction with individual clearance of each control element per user
- Activate/override daylight controls
- Selection of static lighting scenes and dynamic sequences
- Control element for colored light (RGB)
- Control element for color temperature adjustment (TW)

Thanks to the clearly arranged menu structure, you will quickly find the control element (left) that you want to use or the room (right) that you want to control.

The system at a glance

* One DALI ECG per luminaire

The DALI PRO Control app turns your smartphone into a simple control element

RGB and Tunable White applications

Use your smartphone as a user interface for up to 250 keys to easily create even highly complex scenarios: No matter if you want to switch or dim the lights, change the light colors or adjust the color temperature, the DALI PRO Control app enables you to adjust each luminaire or group of luminaires in all rooms according to your individual requirements.

RGB applications

Changing colors takes virtually no time at all: The RGB control element combines color and brightness adjustment.

Tunable White applications

Adjust the color temperature simply by using the app: The TW control element also enables you to control both color temperature and brightness.

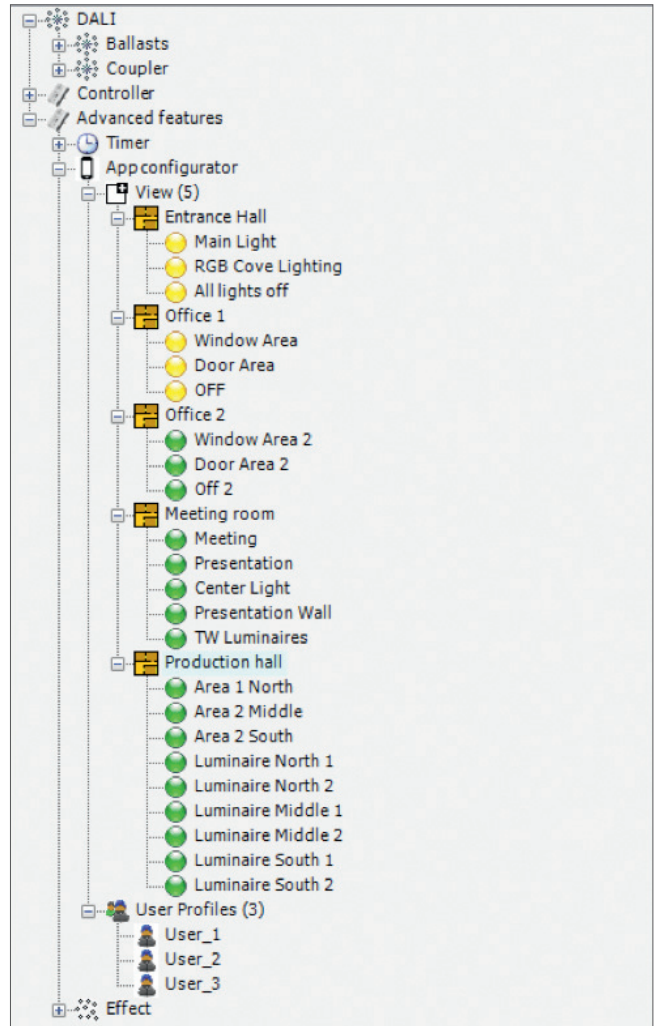

Comfortable configuration of the app

The app configurator – integrated into the DALI PROFESSIONAL software

If more than one pushbutton is required for lighting control, the DALI PROFESSIONAL light management system is the ideal solution. Using the Windows-based DALI PROFESSIONAL software and a USB connection, configuring the app is just as easy and comfortable as adjusting all system parameters with the aid of a personal computer. And, just like with the PC before, a plug-and-play setting has been pre-configured for instant start-up without time-consuming commissioning effort.

Functions at a glance

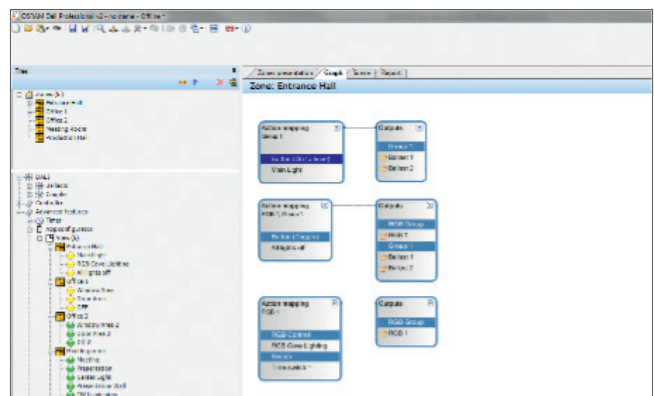

- PC software for control start-up and app configuration
- Graphical user interface for the creation of functions via drag and drop
- Clear and easy structure for app configuration
- Pre-set, adjustable functions of the app control elements
- All elements clearly arranged in groups (tree-structured app overview)
- App start-up analogous to the familiar DALI PROFESSIONAL start-up
- Access restriction via user name and password
 - Up to 30 different user profiles possible
 - Access restriction for each individual function

You define who controls what: All elements can be individually assigned to the respective users.

Clear overview of the elements applied within the app thanks to the software's tree structure.

Easy via drag and drop: Functions can be created via the graphic overview.
