Trust SIRIUS HRI®

At ams OSRAM, we aim to always provide products of highest quality and maximum satisfaction for our customers who choose to buy original lamps. ams OSRAM monitors all quality and performance aspects of its products as carefully as possible, because only an original product performs like an original. And you wouldn't settle for anything less, would you?

In recent years, we have seen a rising number of products which try to copy not only certain parts of our products but also our name, our logo and our packaging. For customers around the world, especially those purchasing SIRIUS HRI® lamps, this means a lack of certainty regarding the originality of our products.

You might have seen product piracy in other areas before. Some of them are easy to spot, yet some are not. When it comes to ams OSRAM products, some of those fakes are so good that neither you nor a professional's eye can spot the difference. As we have reached a stage where you cannot trust your eyes anymore, we want you to know that you can however trust ams OSRAM.

That's why we have developed the Trust SIRIUS HRI® online tool, enabling you to authenticate our lamps by easily checking the unique lamp code on the reflector of the lamp. As you would expect from ams OSRAM, you will get an instant result you can trust.

To check if you've purchased a genuine SIRIUS HRI® lamp, simply visit www.osram.com/trust-sirius and enter the unique lamp code.

Verify the authenticity of your product

To confirm the authenticity of your SIRIUS HRI® lamp purchase, follow these steps to enter the unique 11-digit lamp code which comes in 2 different formats.

Locate the lamp code on your product. It can be found in either of the following locations:

- a) On the label situated on the lamp reflector.
Format: XXXXXXXXX XXX
- b) Laser-etched onto the lamp base.
Format: XXXX XXXX XXX

Regardless of the format, ensure that you enter all 11 digits of the lamp code into the designated text field. Do not include any spaces while entering the code.

Please note that only production codes of lamps manufactured after October 2016 can be verified.
